BULK Capacitor:
- Capacitor 1 (220 µF, 6.3V): Near the power input of the PCB.
- Capacitor 2 Optional (100 µF, 6.3V): Near the 3v3_MOT

Decoupling Capacitors (e.g., 0.1 µF and 1 µF):
Place the 0.1 µF capacitor closest to the VCC pin, followed by the 1 µF capacitor if space allows.
The 0.1 µF capacitor is better at handling high-frequency noise,
so it benefits from the shortest possible connection.
